Seminar Schedule Muddle

The seminar schedule for this term has gotten muddled. The schedule was planned using sticky notes which were dropped before the schedule could be word processed. Each seminar is on a different day, covers a different subject and has a different professor. Karol remembers some but not all the details. Help Karol to reconstruct the schedule so that it can be shared with students.

What Karol remembers:

- 1. There is no class called Advanced Physics.
- 2. Prof. Paulsen teaches the writing course, but it isn't theoretical.
- 3. Professor Elrich doesn't teach physics or quantum theory.
- 4. The writing class is held one day earlier than the modern class.
- 5. Tuesday's class is modern.
- 6. Of the Quantum Theory class and the one taught by Prof. Marten, one is on Tuesdays and the other on Thursdays.
- 7. Between the introductory class and the class on Tuesdays, one is on statistics and the other is on quantum theory.
- 8. Prof. Schneider doesn't teach an introductory course.
- 9. The quantum theory class is held later in the week than the geometry class.
- 10. The class held on Mondays is not advanced.
